

ARTICLE V

UNACCEPTABLE SANITARY SEWAGE AND INDUSTRIAL WASTES

Section 501. The discharge of excessive amounts of unpolluted water or waste to a sanitary sewer is (as reasonably determined by the Authority) prohibited. However, such discharges to storm sewers will be permitted wherever such storm sewers are of adequate capacity. The Township and/or Authority reserves the right to define the amount it deems excessive in each particular instance.

Section 502. The discharge of garbage to the public sanitary sewage system is expressly prohibited unless the garbage is properly shredded garbage.

Section 503. No sanitary sewage or industrial waste from any property other than that for which a permit has been issued as provided in Article X hereof shall be discharged to the public sanitary sewage system.

Section 504. Section 504. No person shall discharge to the public sanitary sewage system any sanitary sewage or industrial waste having any of the following characteristics:

- A. Wastes containing liquids, solids or gases which by reason of their nature or quality may cause fire, explosions, or be in any other way injurious to persons, the structures of the public sanitary sewage system or its operation.
- B. Wastes having a temperature in excess of 150 degrees F or less than 32 degrees F.
- C. Wastes having a pH lower than 5.5 or higher than 9.0 or having any corrosive properties capable of causing damage or hazards to structures, equipment or personnel of the public sanitary sewage system. Where the Township and/or Authority deems it advisable, it may require any person discharging industrial wastes to install and maintain, at his own expense, in a manner approved by the Township and/or Authority or its designated representative, a suitable device to continuously measure and record the pH of the wastes so discharged.
- D. Wastes containing any noxious or malodorous gas or substance which either singly or by interaction with sewage or other wastes is, in the opinion of the Township and/or Authority, likely to create a public nuisance or hazard to life, or prevent entry to sewage structures for their maintenance and repair.
- E. Wastes containing ashes, cinders, sand, mud, straw, shavings, metal, glass, rags, feathers, tar, plastics, wood, hair, chemical or paint residues, greases, lime slurry or viscose materials of such character or in such quantity that, in the opinion of the Township and/or Authority, they may cause an obstruction to the flow in the sewers or otherwise interfere with the proper operations of the public sanitary sewage system. Attention is called to the fact that the maximum permissible concentration will vary throughout the public sanitary sewage system depending upon the size of the particular interceptor sewer receiving the same and the flows therein.
- F. Wastes containing insoluble, non-flocculent substances having a specific gravity in excess of 2.65.
- G. Wastes containing soluble substances in such concentration as to cause the specific gravity of the waste to be greater than 1.1
